2014 Hyde County Community Health Assessment

What is the Community Health Assessment?

The community health assessment, performed at least every four years through the collaboration of local and regional agencies, is both a process and a document which investigates and describes the current health status of the community, what has changed since the last assessment, and what still needs to change to improve the health of the community.

A copy of the 2014 Community Health Assessment can be found on the Health Education page at
